Trending Sounds

User Guide: how to choose sounds in the admin panel, and how visitors listen and download them

Version 1.0 · November 2026

For the website owner and admin team

Contents

Part	What you will learn
Welcome	What Trending Sounds is, how it works in 3 steps, and a 5-minute quick start.
Part 1	**The admin panel.** Where to find the sounds, what the top box and the filter do, how to read the list, how to listen before you choose, how to Approve, Reject and Undo, how to handle a report from a visitor, and a short daily routine.
Part 2	**What visitors see.** Where sounds appear on your website (menu, home page, list page), the sound page with its player, how visitors download an MP3, and how they can report a sound.
Part 3	**Questions and answers** for the most common situations, and a one-page quick reference of every button.

Words used in this guide

Word	What it means
Sound	A short piece of audio, for example a funny voice, a dialogue or a sound effect.
Admin panel	The private control area of your website. Only you and your team can open it.
Collector	The part of the website that finds trending sounds automatically.
Filter	A set of rules that hides sounds you probably do not want (for example songs). Hidden sounds are never deleted.
Approve	You say “yes, publish this sound”. It then appears on the website.
Reject	You say “no”. The sound is hidden from the website and from your main list.
MP3	The audio file that visitors download. It works on every phone and computer.
Visitor	A person who opens your website. They cannot see the admin panel.

TIP Keep this guide open the first few times. After a day or two you will not need it: the whole job takes about 2 to 3 minutes a day.

PICTURES The pictures use **sample sounds**. The names and numbers on your own screen will be different. Red numbers like 1 on a picture match the numbers in the text next to it.

Welcome

Trending Sounds is a feature of your website. Every day it finds funny sounds that many people are using in TikTok videos. You look at the list, choose the ones you like, and your visitors can then **listen to them and download them as free MP3 files**.

You do not need any technical knowledge. This guide shows every screen with pictures and tells you exactly what to click.

How it works: 3 simple steps

1
Collect
The website looks for trending sounds by itself, 4 times every day. You do nothing.

2
Review
You open the admin panel, check the sounds, and press **Approve** or **Reject**.

3
Publish
Approved sounds appear on your website. Visitors listen and download.

IMPORTANT Nothing goes on your website until **you** approve it. The website never publishes a sound on its own.

Quick start (5 minutes)

1. Log in to your admin panel and click **Trending Sounds** in the left menu.
2. Look at the list of sounds. It shows **Passed the filter** by default.
3. Click **Sound** next to a name to listen to it on TikTok.
4. Press the green **Approve** button on the sounds you like.
5. Wait a few seconds until you see **MP3 saved** under the sound.
6. Open your website and click **Sounds** in the top menu. Your sound is there.

What you need

- A computer, tablet or phone with internet.
- Your admin login (the same one you use for the blog and other admin pages).
- About 2 to 3 minutes a day.

1 The admin panel

Where you choose the sounds

1.1 Open the Trending Sounds page

1. Open your website address and add `/admin` at the end.
2. Log in with your admin email and password.
3. In the menu on the left, click **Trending Sounds** 1 .

> **TIP** You can also click **Messages & Inquiries** in the same menu to read reports from visitors (see section 1.8).

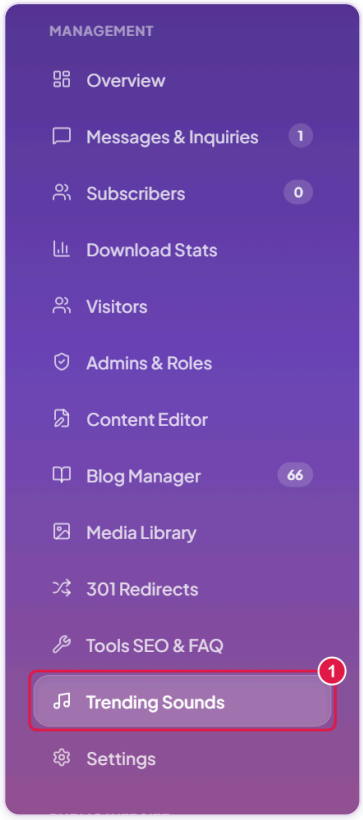

Figure 1. The left menu of the admin panel

1.2 The top box

The first box on the page tells you if the automatic search is working.

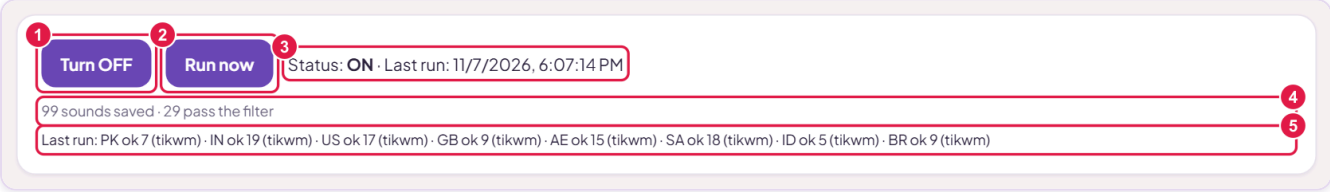

Figure 2. The top box

1 **Turn OFF / Turn ON.** Stops or starts the automatic search. Leave it **ON**.

2 **Run now.** Searches for new sounds right now. It takes 1 to 2 minutes. You normally do not need it, because the website searches by itself 4 times a day (about every 6 hours).

3 **Status and Last run.** "Status: ON" means it is working. "Last run" is the date and time of the last search. It should be recent (within about 6 hours).

4 **Counts.** "99 sounds saved" is everything found so far. "29 pass the filter" is how many match your rules.

5 **Result for each country.** The website checks 8 countries: PK (Pakistan), IN (India), US (USA), GB (United Kingdom), AE (UAE), SA (Saudi Arabia), ID (Indonesia), BR (Brazil). "ok 7" means 7 sounds were found there.

> **GOOD TO KNOW** Sometimes one country says "failed". This is normal. The next search tries again. If a red message says the last run failed in every country, do nothing: the website tries again by itself after about 45 minutes and keeps all your old sounds.

1.3 The filter

The filter is your assistant. It hides sounds that are probably not what you want, so your list stays short and good.

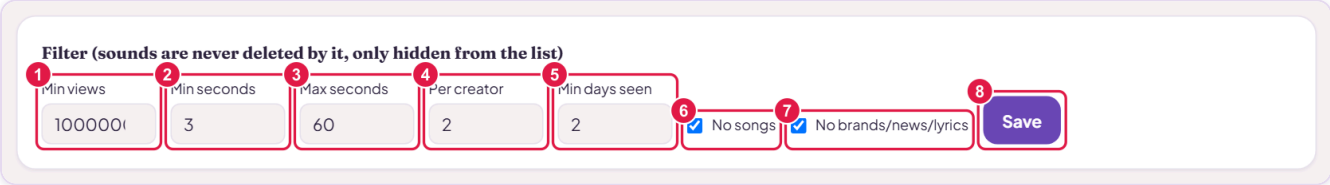

Figure 3. The filter box

Setting	What it does	Normal
1 Min views	A sound must have at least this many views on its most popular video.	1,000,000
2 Min seconds	Hides sounds shorter than this.	3
3 Max seconds	Hides sounds longer than this.	60
4 Per creator	Shows at most this many sounds from the same creator, so one person does not fill your list.	2
5 Min days seen	A sound must have been seen on at least this many different days. This keeps out sounds that were popular for only one day.	2
6 No songs	When ticked, hides music tracks.	ticked
7 No brands/news/lyrics	When ticked, hides company and brand sounds, news channels, song-lyrics pages, religious recitation, and famous people.	ticked
8 Save	Press this after you change anything. Your list updates at once.	

SAFE TO USE The filter **never deletes** a sound. It only hides it from your main list. You can always see hidden sounds again (section 1.4).

TIP If your list is empty or very short, change **Min days seen** to **1** and press **Save**. You will then see every sound that matches your other rules, even those found only today. When you have more sounds, you can set it back to 2.

1.4 Choose which list to see

Above the table there is a menu with five choices. It decides which sounds the table shows.

Choice	What you see
Passed the filter	The main list: sounds that match your rules and are waiting for your decision, plus the ones you approved. **This is where you work.**
Approved	The sounds you approved. These are on your website.
Rejected	The sounds you rejected.
Filtered out	Sounds hidden by the filter. Look here if a sound you expected is missing. The **Filter** column tells you why it was hidden.
All	Everything, in one list.

Each list shows the best 300 sounds, highest score first.

1.5 How to read the list

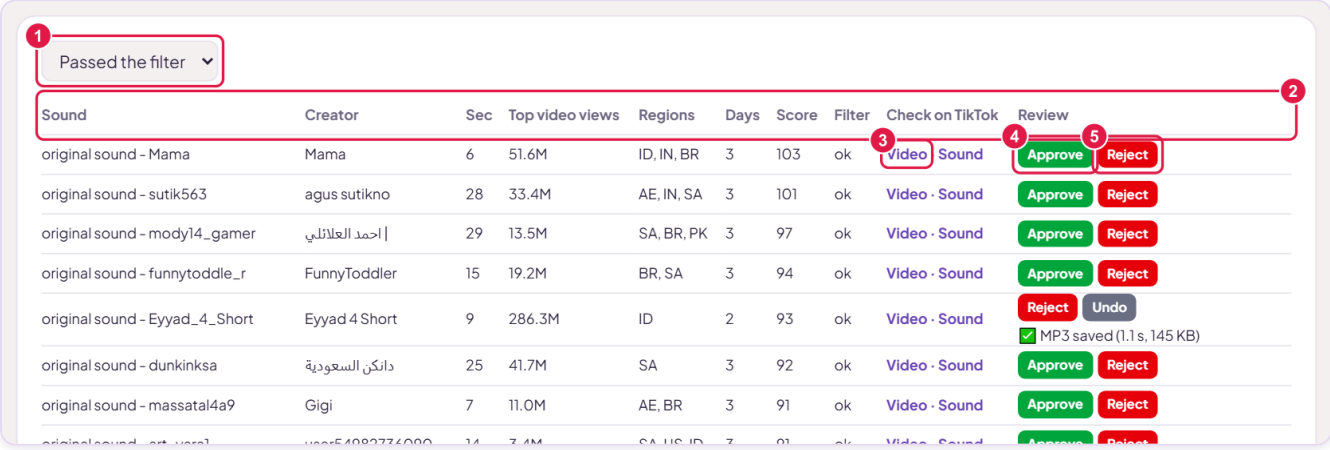

Figure 4. The list of sounds

1. **List chooser.** Chooses which sounds the table shows (section 1.4).
2. **Column titles.** Explained in the table below.
3. **Video · Sound.** Two links to check the sound on TikTok (section 1.6).
4. **Approve.** Puts the sound on your website.
5. **Reject.** Hides the sound.

Column	What it tells you
Sound	The name of the sound on TikTok. Many start with “original sound -” followed by the creator’s account name.
Creator	The person who made it.
Sec	How long it is, in seconds.
Top video views	Views of the most popular video that uses this sound. (“1.2M” means 1.2 million.)
Regions	The countries where the sound was found. **More countries is better.**
Days	On how many different days it was found. **More days means a real trend.**
Score	A number that combines views, countries and days. The list is sorted by it: the best sounds are at the top.
Filter	“ok” means it passed your rules. Otherwise it shows the reason it was hidden (see below).
Check on TikTok	The **Video** and **Sound** links.
Review	The buttons **Approve**, **Reject** and **Undo**.

> **TIP** The best sign of a real trend is a sound that has **many countries and many days**, not just a very big number of views.

Reasons shown in the Filter column (in the “Filtered out” list):

low views	Fewer views than your Min views.
too short / too long	Outside your Min / Max seconds.
few days	Seen on fewer days than your Min days seen.
music	Looks like a song.
junk word	The name looks like a brand, news, lyrics, religious or famous-person sound.
duplicate / same creator	Another copy of the same sound, or too many from one creator.
bad name / no creator	The name or creator is empty or unreadable.

1.6 Listen before you choose

You cannot judge a sound by its name, so listen to it first. It takes a few seconds.

1. Click **Sound** in the **Check on TikTok** column. The TikTok page of that sound opens. Press play and listen.
2. Click **Video** if you also want to watch the most popular video that uses it.
3. Come back to the admin panel and press **Approve** or **Reject**.

How to decide

Good to approve

- Funny voices and short dialogues
- Meme sounds that people repeat
- Funny sound effects
- AI-voice jokes
- Clear, short sounds that people would like to download

Better to reject

- Songs and music, even short parts
- Advertisements and brand sounds
- News and politics, or the voice of a famous person
- Religious recitation
- Clips cut from films, dramas or someone else's work
- Bad language, or just noise with no clear voice

COPYRIGHT A sound can belong to someone else, even when it is a famous meme. If you are not sure, press **Reject**. If an owner complains later, you can remove the sound at any time (section 1.8).

TIP You do not have to decide on every sound. Approve only the ones you like. The others can wait in the list.

1.7 Approve, Reject and Undo

Button	What it does
Approve	Publishes the sound. The website saves the MP3 file, and after a few seconds the sound is on your website.
Reject	Hides the sound from your website and from your main list. You can find it later under **Rejected**.
Undo	Takes your decision back. The sound goes back to "not decided". If it was approved, it disappears from the website.

What happens when you press Approve

1. The row changes **at once**: you now see **Reject** and **Undo**, and the words ⏳ **Saving MP3…**
2. After a few seconds it changes by itself to ✅ **MP3 saved**, with the time it took and the file size. Now the sound is live. You do not need to refresh the page.

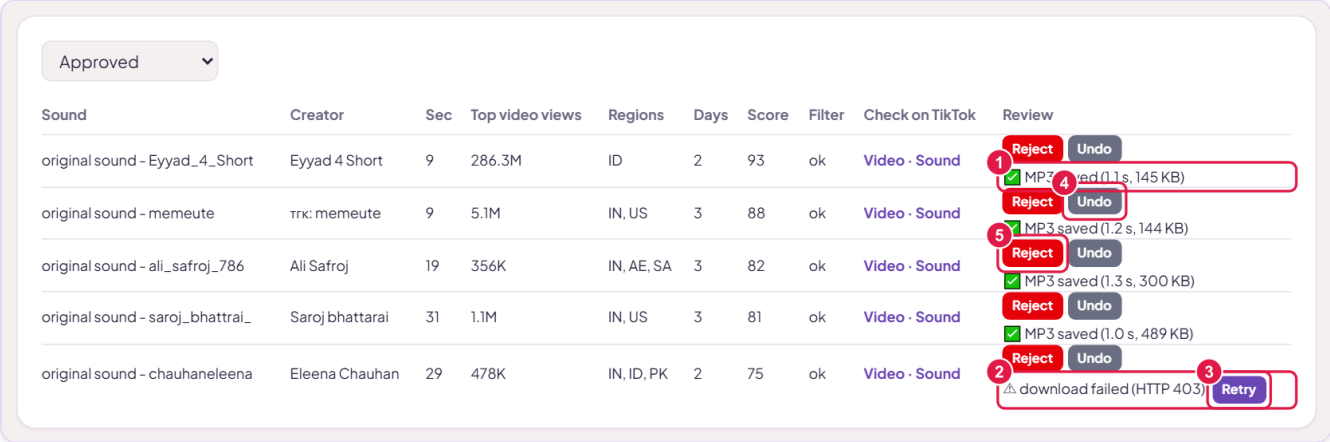

Figure 5. The Approved list

1 **MP3 saved.** The sound is ready and live. (Here it took 1.1 seconds and the file is 145 KB.)

2 **Warning.** The file could not be saved this time (for example “download failed”).

3 **Retry.** Press it to try again. If it keeps failing, wait: the website also retries by itself after every automatic search.

4 **Undo.** Takes the sound off the website.

5 **Reject.** Takes the sound off the website and moves it to Rejected.

The Rejected list

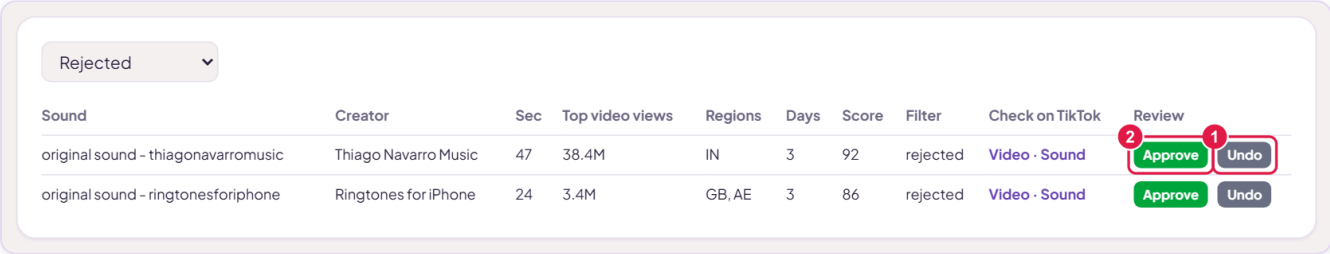

Figure 6. The Rejected list

1 **Undo.** Moves the sound back to “not decided”.

2 **Approve.** Changed your mind? Approve it straight from here.

> **GOOD TO KNOW** Sounds you approved **always stay** in your Approved list, even if the filter would hide them. Sounds you rejected **never come back** by themselves. Changes appear on your website within a few minutes.

1.8 Reports from visitors

Every sound page has a link **Report this sound**, and the website footer has **Report Content**. When a visitor sends a report, it arrives in your admin panel.

1. A small number (1) appears next to **Messages & Inquiries** in the left menu (Figure 7). Click it.
2. Find the message whose label starts with **Sound report** (1 in Figure 8).
3. Read what the visitor wrote (2 in Figure 8): the sound link, the reason and the details.

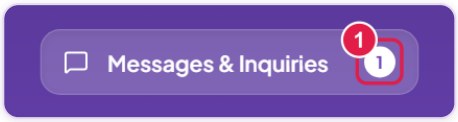

Figure 7. New message

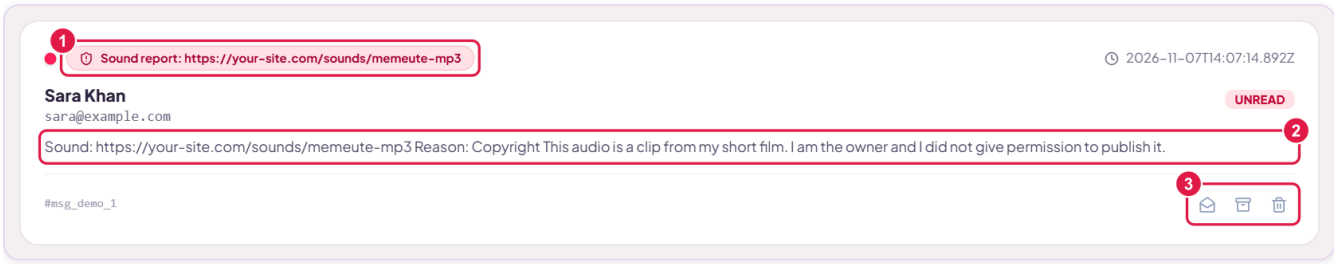

Figure 8. A sound report in Messages

1. **The label.** Shows it is a sound report and which sound.
2. **The report.** The sound link, the reason (for example Copyright) and the visitor's details.
3. **Buttons.** Mark as read, archive, or delete the message.

What to do

1. Open the sound link and listen to the sound.
2. If the report is right: go to **Trending Sounds**, choose **Approved** in the list chooser, find the sound and press **Reject**. It leaves your website within a few minutes.
3. Write back to the visitor by email. The website promises that a valid report is handled within **24 to 48 hours**.
4. Mark the message as read, or archive it.

> **IMPORTANT** Nothing is removed automatically. Only you can remove a sound. This also protects you from false reports.

1.9 Your daily routine (2 to 3 minutes)

- ☐ Open **Trending Sounds**. Check that **Last run** is recent.
- ☐ Look at the new sounds in **Passed the filter**. The best ones are at the top.
- ☐ Click **Sound** to listen to the ones you like. Press **Approve** on the good ones.
- ☐ Wait until each approved sound shows **MP3 saved**.
- ☐ Open **Messages & Inquiries** and check for a new **Sound report**.
- ☐ Once a week, open the **Sounds** page of your website and check that everything looks good.

2 What visitors see

Where sounds appear on your website and how people download them

2.1 Where visitors find the sounds

Approved sounds appear in three places on your website.

The top menu

A **Sounds** link (1) in the top menu takes visitors to the list of all sounds. On a phone, it is in the menu opened with the three-line button.

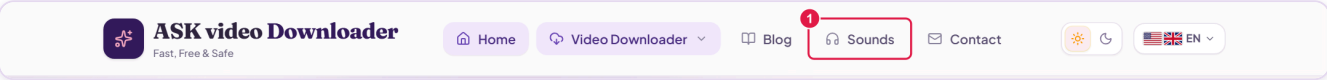

Figure 9. The Sounds link in the menu

The home page

The section **Trending Meme Sounds** is on the home page, just **above** “Free Online Tools”. It shows your 4 most viewed approved sounds. It appears only when at least one sound is approved.

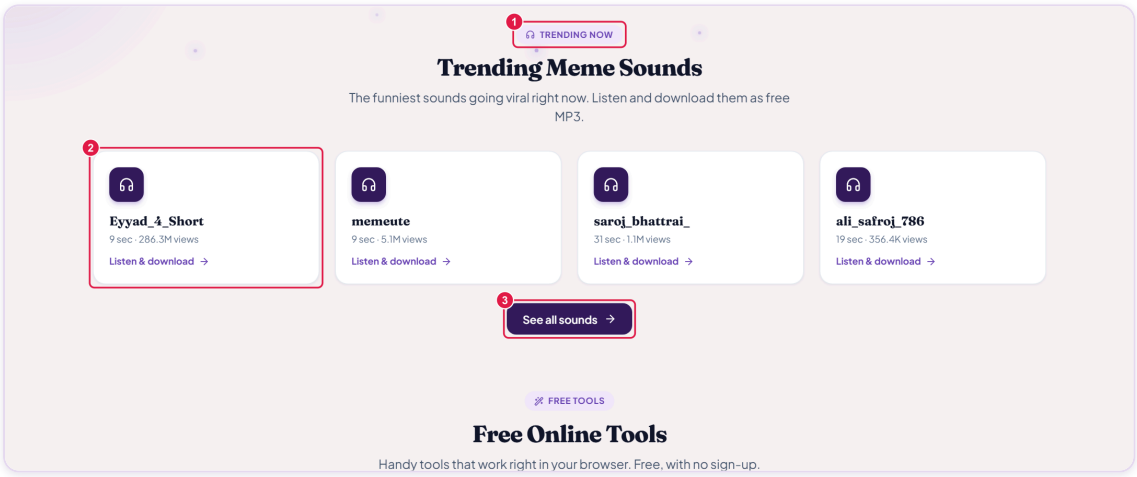

Figure 10. The home page section

1. **“Trending now” label** and the heading of the section.
2. **A sound card.** Click it to open the sound page.
3. **See all sounds.** Opens the full list.

The Sounds page

This page lists **every approved sound**, with the most viewed first.

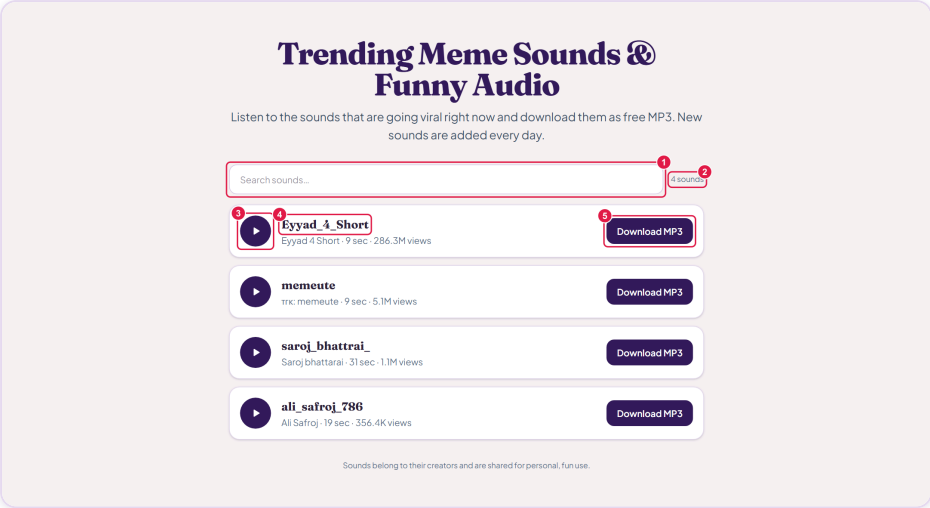

Figure 11. The Sounds page

1. **Search box.** Type a word to find a sound.
2. **Counter.** How many sounds match.
3. **Play button.** Plays the sound right here. Only one sound plays at a time.
4. **Sound name.** Click it to open the sound's own page.
5. **Download MP3.** Saves the file to the visitor's phone or computer.

> **GOOD TO KNOW** A sound appears here only after you approved it **and** its MP3 shows "MP3 saved" in the admin panel.

2.2 The sound page

Every approved sound has its own page. It has a music player in the website's colours. The speaker in the middle **vibrates lightly while the sound plays**.

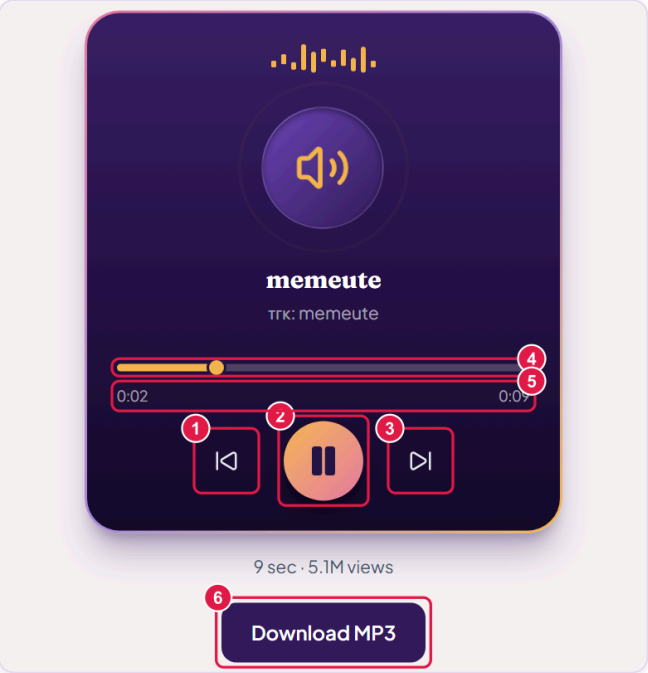

Figure 12. The player

1. **Previous.** Opens the sound before this one in the list.
2. **Play / Pause.** Starts or stops the sound.
3. **Next.** Opens the next sound in the list.
4. **Progress bar.** Shows how far the sound has played. Tap or drag it to jump forward or back.
5. **Time.** On the left, how long it has played. On the right, the full length.
6. **Download MP3.** Saves the sound as a file. It is free, with no sign-up.

Under the player, visitors also see the length of the sound and the number of views.

Under the player

The page also has a short text about the sound, an answer to common questions, and a list of other sounds.

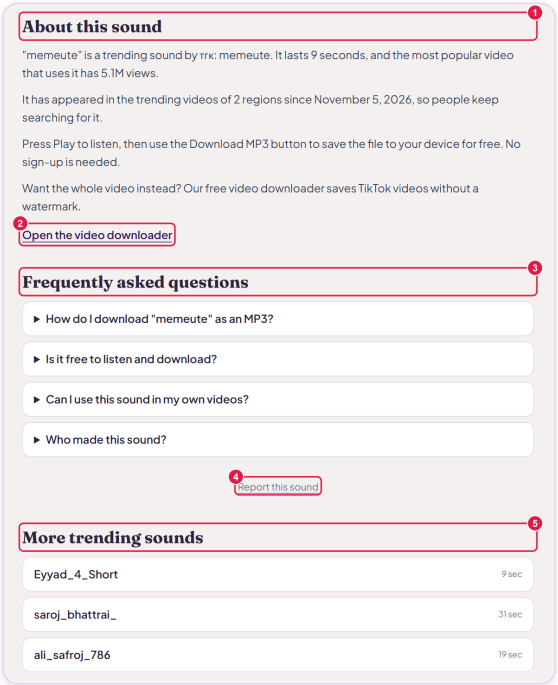

Figure 13. The rest of the sound page

1. **About this sound.** A short text written automatically from the sound's real details: its length, views, and since when it is trending.
2. **Open the video downloader.** Takes visitors to your video downloader on the home page.
3. **Frequently asked questions.** Four short answers, for example "How do I download it as an MP3?".
4. **Report this sound.** Opens the report form (section 2.4).
5. **More trending sounds.** Links to other sounds.

2.3 How a visitor downloads an MP3

1. Open your website and click **Sounds** in the menu (or click a sound on the home page).
2. Press the round **play** button to listen.
3. Press **Download MP3**, on the list or on the sound page.
4. The file is saved. On a computer it goes to the **Downloads** folder. On a phone, look in **Downloads** or in the **Files** app.
5. Open the file with any music or audio app. It also works as a ringtone or in a video editor.

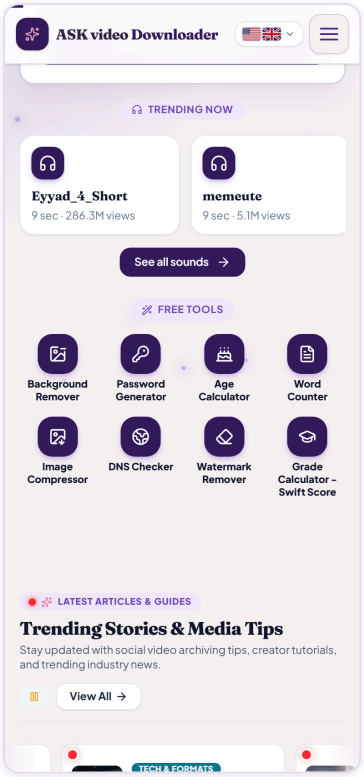

Figure 14. On a phone: the home page

Figure 15. On a phone: the sound page

2.4 Report Content

If someone thinks a sound should not be on your website (for example it uses their work), they can tell you. There are two ways to reach the form:

- the **Report this sound** link on every sound page (the sound link is filled in for them), or
- the **Report Content** link (1) at the bottom of every page of your website.

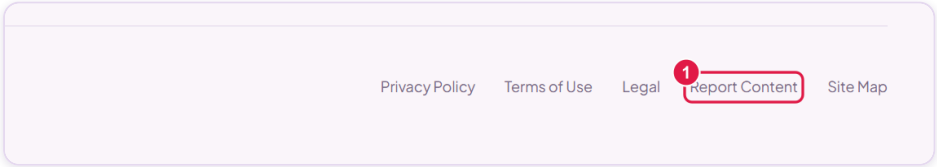

Figure 16. The Report Content link in the website footer

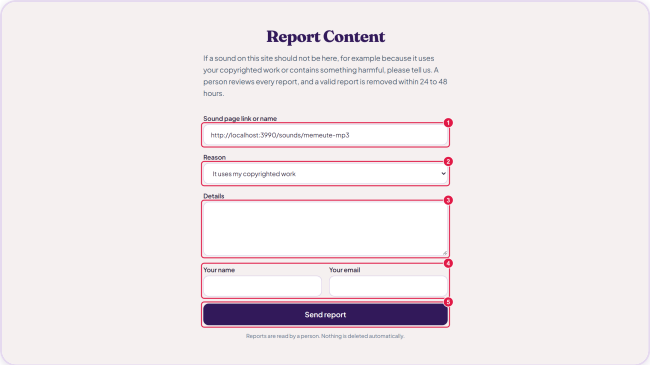

Figure 17. The report form

1. **Sound link or name.** The visitor writes which sound (filled in automatically from a sound page).
2. **Reason.** Copyright, harmful or offensive, their voice or private information, or other.
3. **Details.** What is wrong, and who owns the sound.
4. **Name and email.** So you can answer.
5. **Send report.** The report arrives in your admin panel (section 1.8).

GOOD TO KNOW A visitor can only send a report. They can never remove a sound. A person (you) reads every report, and nothing is deleted automatically.

3 Questions and answers

The most common situations

Question	Answer
I approved a sound but I cannot see it on the website.	Open the **Approved** list. Under the sound it must say **MP3 saved**. If it says "Saving MP3…", wait a few seconds. If there is a warning, press **Retry**. After that, wait a few minutes: the website refreshes its list about every 5 minutes.
My list is empty or very short.	Most likely **Min days seen** is 2 and the sounds are new. Change it to **1** and press **Save**, or wait a day or two. Also check that the list chooser says **Passed the filter**.
How often does the website look for new sounds?	4 times a day, by itself. Press **Run now** to look right away.
"Last run" is old. What do I do?	Press **Run now**. If the status says **OFF**, press **Turn ON**.
A famous sound is missing from my list.	The filter may have hidden it. Choose **Filtered out** in the list chooser and read the **Filter** column to see why.
How do I remove a sound from the website?	Press **Reject** (or **Undo**). It leaves the website within a few minutes.
Can visitors see sounds that I did not approve?	No. Only approved sounds with a saved MP3 are shown.
A sound has huge views. Is it new?	Not always. "Top video views" counts one very popular video, which may be old. Look at **Days** and **Regions**: many days and many countries means it is really trending now.

Question	Answer
How many sounds should I approve?	Start with 5 to 10 good ones. Then add a few every day. Quality is more important than quantity.
Will the sounds appear in Google search?	Not yet. For now the sound pages are kept out of Google search, because your website is still on a test address. When the final website address is ready, they can be switched on. Ask your developer at that time.
Do I need to refresh the admin page?	No. After you press Approve, the page updates by itself.

Quick reference

Where is what?

I want to…	Go to…
Choose sounds	Admin panel → **Trending Sounds**
Read reports from visitors	Admin panel → **Messages & Inquiries**
See all sounds as a visitor	Website → **Sounds** in the top menu
See the home page section	Website home page, above **Free Online Tools**
Open the report form	Website footer → **Report Content**

All buttons

Button	Where	What it does
Turn OFF / ON	Top box	Stops or starts the automatic search.
Run now	Top box	Looks for new sounds right now.
Save	Filter box	Saves your filter settings.
Video · Sound	List	Opens the video or the sound on TikTok so you can check it.
Approve	List	Publishes the sound on the website.
Reject	List	Hides the sound.
Undo	List	Takes your decision back.
Retry	Approved list	Tries to save the MP3 again.
Download MP3	Website	Visitors save the sound as a file.

REMEMBER Nothing is published until **you press Approve**. Nothing is deleted without you. When in doubt, press **Reject**: you can always change your mind.
